

Bonded uplink and backup scenario

/30 routed to the primary link

/30 routed to the backup

Block routed to both

Outgoing traffic sent via both ADSL lines, FireBrick switches to one if other fails.

Incoming traffic via Office 2000 (primary) unless it fails, then Backup 500 (Backup) automatically

Downlink 2Mb/s normally, 500Kb/s if primary lines fails

Uplink 500Kb/s normally, 250Kb/s if one line fails
